

THOMPSON'S OFFSET PERFORATING RULES

- Printers have long considered perforating, scoring and slitting on offset too difficult. Now you can competitively quote jobs which require perforating, scoring or slitting, and still meet those critical deadlines by eliminating the bindery steps.
- Thompson Manufacturing offers you a choice for your Offset Perforating Rules, down the center or down the side.
- The Center Rules are designed for high volume offset or web runs. Rules are stable and won't tilt or bend. The Side Rules are perfect for shorter runs. Rules are easy to set up and corners require no butt cut.
- Our packaging is designed with the printer in mind. The convenient, hassle free spool enables you to easily unroll the amount of rule desired and prevent waste.

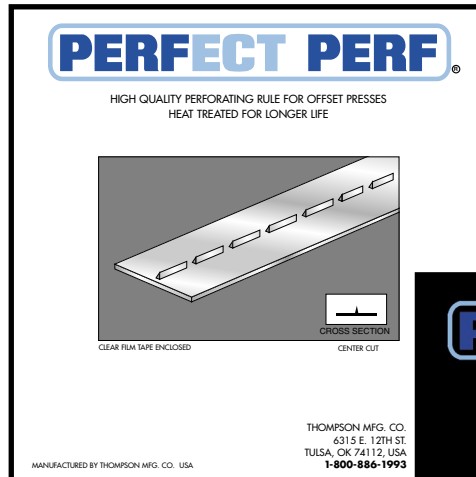

800-886-1993

CENTER

SIDE

Made with durable hard carbon steel and heat treated for strength. These rules can be used for those long runs or again and again on short runs. This leaves you, the printer, with endless printing and perforating possibilities you can do in your own shop.

TECHNICAL SPECIFICATIONS (Center or Side):

- PERFECT PERF:** 10' and 20' lengths, specify 6, 8, 12, or 16 teeth per inch, specify card or paper usage.
Microperfs, specify 30, 40 & 50 teeth per inch, available for paper usage only.
- PERFECT SCORE:** 10' and 20' lengths, specify card or paper usage.
- PERFECT SLIT:** 10' and 20' lengths, specify card or paper usage.
- PERFECT SNAP:** 10' and 20' lengths, specify 3 or 4 teeth per inch, available for paper usage only.

Special heights available upon request.

THOMPSON'S OFFSET PERFORATING RULES

PERFECT PERF[®]

Perforates clean and tears apart easily without tearing the sheet. PERFECT for coupons, reply cards, stamps and return envelopes.

PERFECT SCORE[®]

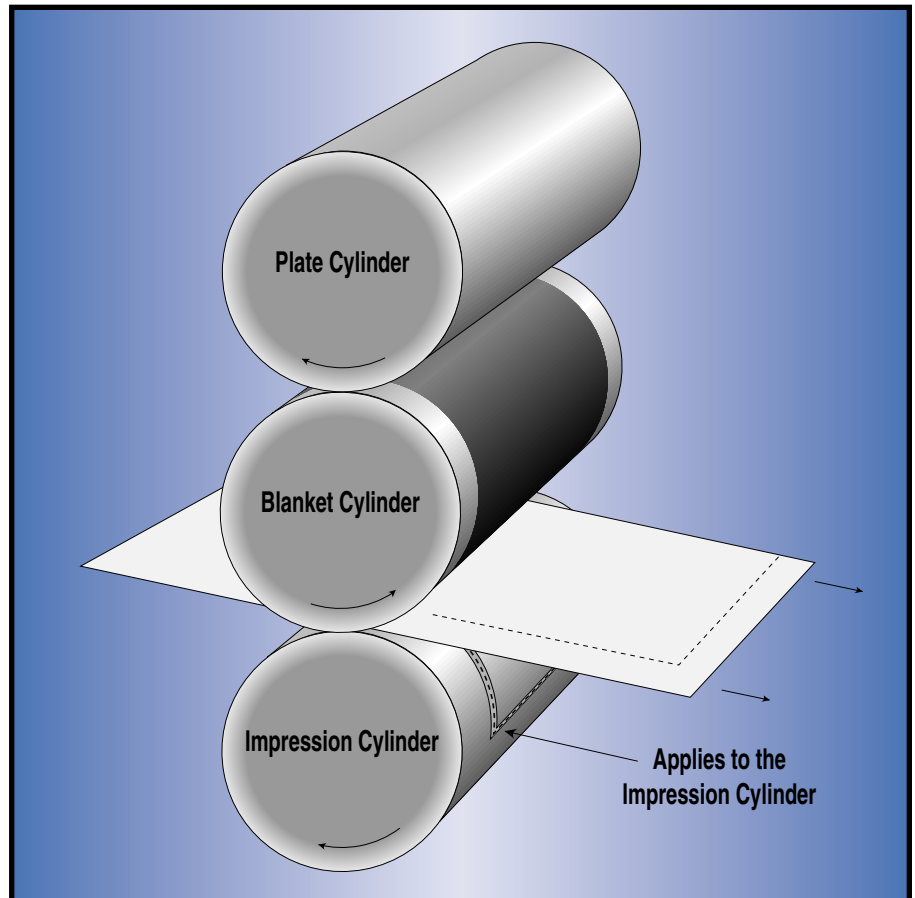

The scoring rule with the rounded edge (not flat or dull) is ideal for coated stock. PERFECT for folding jobs such as greeting cards, invitations, brochures and folders.

PERFECT SLIT[®]

The sharp edge insures clean, exact cuts which creates an opening where required. PERFECT for insertions and card cuts.

PERFECT SNAP[®]

Available in three or four teeth per inch. PERFECT for snap apart forms like cards, invoices, receipts, order forms, purchase orders and specialty items.

All rules coated with double sided tape. This feature enables you to directly apply the rules vertically or horizontally to the impression cylinder. The diagram above shows just how simple it is to use.

Thompson's PERFECT RULES are simply applied to a clean impression cylinder. After transferring a guideline to the cylinder cut off the required amount of rule and expose the adhesive coating. Apply the rule on your guideline and then overlay the rule with furnished tape.

Once rule is secured on the impression cylinder it is advisable to adjust the pressure between the impression and blanket cylinders until your desired printing and perforating results are obtained.
